MiniStar™ LED Conversion Kits

Check out our full line of premium LED flashlights, worklights and LED conversion kits for your existing flashlights. Don't settle for anything less than TerraLUX professional grade lighting products.

**For Use in Mag Instrument's®
Rechargeable Flashlights Only**

To install LED:

1. Remove front bezel of flashlight containing the glass lens by turning counter-clockwise.
2. Remove lens, O-ring, reflector, and bulb (you will not need these, but may wish to keep them for future use).
3. Push open head of flashlight down until bulb socket is exposed.
4. The mode switch (in side opening of bezel) will be factory set for the multi-mode function (left-most position). For single mode, use a paper clip or similar object to slide switch to the right.
5. Plug the TLE-300MR-EX into the two-pin socket. Check that the polarity is correct by turning on the flashlight (do not look into the light!). If it does not light, remove unit, rotate 180 degrees and plug back in.
6. Raise the head by pulling it straight up. Remove protective film from the plastic lens provided, and insert O-ring and lens. This lens will not shatter when dropped. The center of lens holder will rub against the front lens. This is normal and keeps the TLE-310MR-EX in place. Replace front lens assembly by turning clockwise onto flashlight head.
